

How Secure Is Your Network?

- **Do you have VIRUS PROTECTION?**

It is critical that virus protection be updated regularly. Virus protection can easily be disabled by new viruses, rendering it useless. We can help you ensure that your virus software is installed and running on every machine, and that it is updating itself.

- **Do you have a SECURE FIREWALL?**

It is critical that virus protection be updated regularly. Virus protection can easily be disabled by new viruses, rendering it useless. We can help you ensure that your virus software is installed and running on every machine, and that it is updating itself. Even if you have antivirus software installed and updated, many viruses are written to avoid detection by some of the most popular antivirus programs.

- **Will your BACKUPS restore your data?**

Industry analysts estimate that 50% of all tape backups fail to properly restore company data. Research has shown that 90% of small companies that lose their data in a disaster are out of business within 2 years. Ask how DataDudes can help you avoid the loss of data in the event of a disaster or even accidental data loss.

- **Do your computers or servers have SECURITY VULNERABILITIES?**

New security vulnerabilities in software are found daily. By keeping your computers up to date with the latest security updates and bug fixes, you can help reduce the spread of viruses, increase system stability, and help prevent unauthorized access. Even if your company doesn't store sensitive data on your systems, security vulnerabilities may allow unrestricted access to your systems for hackers to commit crimes.

Let Data Dudes help secure your network today!
